Re: initial notification of PCB contaminated oil event

Dear Ms. Balback,

As a follow up to the voicemail messages I left with your office today, the purpose of this letter is to provide notification to your office of the PCB event that occurred at our Salt Lake City location.

On August 26th, we became aware of a contamination event at our Salt Lake City Thermo Fluids location. The subsequent investigation and resampling of customers identified your facility as the source of the PDB contaminated oil. On August 20th, under bill of lading number 2623526, Thermo Fluids picked up approximately 350 gallons of material for which Mr. Brent Jeppson signed on behalf of JBT Aerotech. By way of Mr. Jeppson's signature, JBT Aerotech attests that the material being picked up was represented to us as Non-RCRA, Non-Hazardous material that does not contain any PCBs.

During our investigation in which samples were taken from affected tanks, transport vehicles and truck retain samples, a team was sent to all of our customers serviced within the timeframe of the event. Your main tank at the 3100 Pennsylvania Avenue location in Ogden tested positive for PCB's. Specifically, PCB Arochlor 1016 at a concentration of 49 parts per million.

For your reference, I have enclosed a copy of the analytical report from our third party laboratory, the bill of lading and a copy of the generator waste questionnaire certifying that your profiled material is non-hazardous.

Please provide me the contact information and policy numbers for your company's General Liability and Pollution Liability Insurance providers and Newmont's anticipated plan to reimburse Thermo Fluids for the harm caused by this event.

Respectfully,

Greg Hedger
